DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims are rejected under 35 U.S.C. 102(b) as being anticipated by DE10229020A1 hereafter “020.

Regarding claims 9-12, 14-15, “020” discloses a connection element with features of the claimed invention including a holder supporting a magnetic field sensor. Even though “020” teaches a holder which is capable of being positioned in a zero line magnetic field without influencing the measuring field, (see, the English abstract), but such limitation does not alter the elements or structure of this apparatus claim. Therefore, does not given substantial weight.

Regarding claims 10, 11, “020” teaches the use of flexion bar as a spring element.

Regarding claims 12, 14, the holder has a round and symmetric design.

Regarding claim 15, “020” teaches the affixation of the holder and connecting member.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person

having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 13 and 16 are rejected under 35 U.S.C. 103(a) as being unpatentable over “020”.

Regarding claim 13, apparently “20” does not show the uses of deformable web, however, it would have been obvious for a skilled artisan at the time of the invention to modify “020” to make arrangements for the holder to be tightly and securely in any hole for any desirable intended use.

Regarding claim 16, although, “020” in its English translated abstract, does not elaborate on the nature of the joint, joining of two mechanical pieces can be accomplished by various way. It would have been obvious for a skilled artisan at the time of the invention to modify “020” to use any kind of welding including modern laser welding, in order to accurately and securely attaché the pieces together⁹.

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
